

## Claims

- [c1] 1. An electronic programming guide system comprising:  
a browser at a first viewer location;  
a computer system at a second location, coupled to said browser via a computer network;  
said browser displaying a guide comprising a plurality of linearly arranged tabs, where each tab is a link to one of a plurality of views of an electronic programming guide; and,  
where each of said plurality of views is associated with one of a plurality of distinct view content characteristics.
- [c2] 2.A system of claim 1 wherein one of said plurality of distinct view content characteristics is variable, depending upon a user specific characteristic.
- [c3] 3.A system of claim 2 wherein said user specific characteristic comprises an individual viewer selected preference.
- [c4] 4.A system of claim 2 wherein said user specific characteristic comprises a computer-generated signal representative of prior programming selections made by a viewer.
- [c5] 5.A system of claim 4 wherein said signal is further representative of a duration characteristic of prior programming selections made by a viewer.
- [c6] 6.A system of claim 5 wherein said user specific characteristic further comprises an individual viewer selected preference.
- [c7] 7.A system of claim 6 wherein said guide includes a two-dimensional array of programming cells where each cell represents a different time slot associated with a different television channel.
- [c8] 8.A system of claim 7 wherein said plurality of linearly arranged tabs is disposed on a periphery of said two-dimensional array.
- [c9] 9.A system of claim 8 wherein said signal is further representative of an individual user and further representative of a distinct location from which

said individual user is operating said browser.

- [c10] 10. A method of displaying programming information to a viewer comprising the steps of:
- providing an array of programming choices available to a viewer;
  - changing a characteristic of said array in response to a user selection of a tab from a plurality of linearly arranged tabs disposed along a peripheral edge of said array.
- [c11] 11. A method of claim 10 further comprising changing display content associated with one of said plurality of linearly arranged tabs as a result of a prior action.
- [c12] 12. A method of claim 11 wherein said prior action is a user selection among a plurality of user preferences.
- [c13] 13. A method of claim 11 wherein said prior action is a computer-generated signal representative of a prior viewing selection by a viewer.
- [c14] 14. A method of claim 13 wherein said prior action further comprises a user selection among a plurality of user preferences.
- [c15] 15. A method of claim 14 wherein said prior action further comprises a duration characteristic of a prior viewing selection by said viewer.
- [c16] 16. A method of claim 15 further comprising providing location information representative of a geographic location of said viewer and changing display content associated with one of said plurality of linearly arranged tabs based upon said location information.
- [c17] 17. A system comprising:
- means for providing an array of programming choices available to a viewer;
  - and,
  - means for changing a characteristic of said array in response to a user selection of a view from a plurality of views available.

[c18] 18.A system of claim 17 further comprising means for permitting a viewer to adjust a view characteristic associated with one of said plurality of views based upon a personal preference of said viewer.

[c19] 19.A system of claim 18 further comprising means responsive to geographic location information for providing a location specific view characteristic of one of said plurality of views.

[c20] 20.A system comprising:  
a PC at a first viewer location, said PC having a browser, which provides information representative of an individual user's identity and a geographic location of said PC;  
the individual user's identity is culled from login data on said PC;  
a computer system at a second location, coupled to said PC via a computer network;  
said browser displaying a guide comprising a plurality of linearly arranged tabs, where each tab is a link to one of a plurality of views of an electronic programming guide;  
wherein each of said plurality of views is associated with one of a plurality of distinct view content characteristics;  
wherein one of said plurality of distinct view content characteristics is variable, depending upon a user specific characteristic;  
wherein said user specific characteristic comprises a computer-generated signal representative of prior programming selections made by a viewer;  
wherein said signal is further representative of a duration characteristic of prior programming selections made by a viewer;  
wherein said user specific characteristic further relates to a household level geographic location of said viewer;  
wherein said user specific characteristic further is representative of a time of day, and a day of week characteristic of prior programming selections made by the viewer;  
wherein said guide includes a two-dimensional array of programming cells where each cell represents a different time slot associated with a different

television channel;

wherein a floating cursor-linked display is provided for detailed programming information for a cell in said two-dimensional array of programming cells;

wherein said plurality of linearly arranged tabs is disposed on a periphery of said two-dimensional array; and,

wherein said periphery is a bottom side.
